BLACK
WITH LOVE FOR DETAILS

SUPERIOR FLOW PROPERTIES

AFFINIS® PRECIOUS wash materials have a contact angle of only 10°. Its superior flow properties allow the impression material to easily capture all critical surface detail of the

preparations in a wet environment. The unique surface affinity prevents air entrapments and margin distortion.

For perfect impressions.

OUTSTANDING READABILITY

The new black tray material **AFFINIS** heavy body BLACK EDITION reaches with gold or silver coloured **AFFINIS** PRECIOUS excellent readability of the impression.

The unique colour combination displays details even more precisely and supports the qualitative assessment of the impression result.

Visible precision with love for details.

The unique silver and gold pigmentation drastically reduces the light scattering effect and the readability is intensified by maximum colour contrast.

AFFINIS® PRECIOUS

Filler ● **AFFINIS®** PRECIOUS pigments —

The lamellar structure of the mirror like filler reduces light scattering of the surface which results in a better contrast and readability.

Standard impression material

Filler ● Standard pigments ●

The irregular structure of the standard fillers leads to undirected light scattering at the surface which results in less contrast and inferior readability.

Initial surface affinity on moist dentin

Defined amount of material on moist dentin surface after 10 s.

AFFINIS® PRECIOUS was developed to produce accurate results in the mouth and in the lab. The wettability allows the wet gypsum to flow more easily into the impression, producing more accurate stone models. An accurate model is the key for the lab technician to create proper fitting restorations.

AFFINIS® PRECIOUS regular body

AFFINIS® PRECIOUS flows directly into the sulcus preventing air entrapments.

Thixotropic properties prevent slumping.

The self-contouring consistency and the highly active surfactant agent produces an innovative affinity to the moist tooth structure.

AFFINIS® PRECIOUS wash materials produce accurate, void free impressions.
